A SHIPPER'S RESOURCE

Aviation and Aerospace Import Readiness Checklist

12 things to confirm before you book your next shipment, so the permits, customs treatment and delivery plan are settled early.

Why Late Compliance Costs You in Aviation

For aviation and aerospace cargo, the cost is rarely the freight. It is a permit, classification or handling requirement discovered after the goods have already shipped. Typical cargo includes aircraft, engines, rotables, avionics, ground-support equipment, tools and AOG replacement parts. Mills Permits, Mills Customs and Mills Logistics work together to settle these points before you book.

Use this list before you book. Any box you cannot tick is the item to resolve first.

The Readiness Checklist

- [ ] **1. The cargo type is identified**
  Say whether the shipment is an aircraft, engine, rotable, avionics unit, tool or an urgent aircraft-on-ground part.

- [ ] **2. Technical documents are collected**
  Gather release certificates and traceability records for each part, and confirm what the maintenance organization requires.

- [ ] **3. CAAP requirements are confirmed**
  Confirm whether CAAP approval or notification applies to the item or its use, and who handles it.

- [ ] **4. NTC rules for radio equipment are checked**
  For avionics or radio equipment, confirm whether an NTC permit or approval applies.

- [ ] **5. Dangerous goods are identified**
  Flag batteries, fluids, gases and other regulated items, and prepare the declarations they need.

- [ ] **6. Importer status and tax treatment are checked**
  Confirm the importer's status with BIR and customs, and any tax treatment you plan to rely on.

- [ ] **7. Classification and valuation are settled**
  Agree on the classification and the value for each part, with documents that support both.

- [ ] **8. Temporary importation or repair-and-return is clear**
  If parts are leaving and returning for repair, confirm the correct customs treatment before they move.

- [ ] **9. An AOG priority plan exists**
  For urgent parts, agree on a priority route, standby broker and delivery point before the need arises.

The Readiness Checklist (continued)

- [ ] **10. Packaging suits sensitive parts**
  Confirm the packing protects delicate parts and keeps traceability tags and documents with them.

- [ ] **11. Release and delivery to site are planned**
  Plan customs release and delivery to the hangar or airside location, with a receiving contact.

- [ ] **12. Technical control records are kept**
  Keep customs, permit and traceability records together so the part's history can be shown if asked.

Moving aviation cargo?
Let us check it before it ships.

Book a short call and we will review your product, permits and delivery plan before it moves.
