A SHIPPER'S RESOURCE

Data Centers and Digital Infrastructure Import Readiness Checklist

12 things to confirm before you book your next shipment, so the permits, customs treatment and delivery plan are settled early.

Why Late Compliance Costs You in Data Centers

For data center and digital infrastructure cargo, the cost is rarely the freight. It is a permit, classification or handling requirement discovered after the goods have already shipped. Typical cargo includes servers, racks, switches, storage, UPS systems, batteries, generators, cooling units, transformers, cables, security and fire systems. Mills Permits, Mills Customs and Mills Logistics work together to settle these points before you book.

Use this list before you book. Any box you cannot tick is the item to resolve first.

The Readiness Checklist

- ☐ **1. The equipment list is grouped by category**
  Group items into IT hardware, power, cooling and safety systems, since each group can face different rules.
- ☐ **2. NTC requirements are checked**
  For network and radio equipment, confirm whether an NTC permit or approval applies.
- ☐ **3. Product standards are checked**
  Confirm whether DTI-BPS certification applies to any item in the shipment.
- ☐ **4. Batteries and dangerous goods are identified**
  Flag UPS batteries and other regulated items, and prepare the documents they need for transport.
- ☐ **5. Environmental rules are reviewed**
  Confirm whether DENR-EMB requirements apply to cooling systems, refrigerants or other items.
- ☐ **6. Incentive status is confirmed**
  If you expect PEZA or BOI incentives, confirm the status and what must be in place before the goods arrive.
- ☐ **7. Classification is agreed**
  Agree on tariff classification for each item and component, and keep descriptions consistent.
- ☐ **8. Valuation is reviewed**
  Check how bundled hardware, software and services are valued, and keep documents that support the figures.
- ☐ **9. Packaging protects sensitive equipment**
  Confirm shock, static and moisture protection for servers and other delicate items.

The Readiness Checklist (continued)

- ☐ **10. Heavy equipment handling is planned**
  Plan lifting, trucking and access for transformers, generators and other heavy units.

- ☐ **11. Delivery windows are agreed with the site**
  Agree on receiving times, loading access and security procedures with the data center operator.

- ☐ **12. Records and spares are organized**
  Keep serial numbers, permits and customs documents together, and plan the movement of spares.

**Moving data centers cargo?
Let us check it before it ships.**

Book a short call and we will review your product, permits and delivery plan before it moves.
