A SHIPPER'S RESOURCE

Renewable Energy and Power Import Readiness Checklist

12 things to confirm before you book your next shipment, so the permits, customs treatment and delivery plan are settled early.

Why Late Compliance Costs You in Renewable Energy

For renewable energy and power cargo, the cost is rarely the freight. It is a permit, classification or handling requirement discovered after the goods have already shipped. Typical cargo includes solar panels, inverters, battery-energy storage systems, wind components, turbines, transformers, cables, control systems and mounting structures. Mills Permits, Mills Customs and Mills Logistics work together to settle these points before you book.

Use this list before you book. Any box you cannot tick is the item to resolve first.

The Readiness Checklist

- ☐ **1. The component list is complete**
  List panels, inverters, batteries, turbines and other components with specifications and quantities.
- ☐ **2. DOE project documents are in order**
  Confirm whether DOE project approvals or documents are needed to support the import.
- ☐ **3. Product standards are checked**
  Confirm whether DTI-BPS certification applies to any item in the shipment.
- ☐ **4. Battery and dangerous goods rules are checked**
  Flag battery storage and other regulated items, and prepare the declarations they need.
- ☐ **5. Environmental requirements are reviewed**
  Confirm whether DENR-EMB requirements apply to batteries, transformers or other equipment.
- ☐ **6. Incentive status is confirmed**
  If you expect BOI or PEZA incentives, confirm the status and what must be in place before arrival.
- ☐ **7. BIR and tax treatment is checked**
  Confirm the tax steps that apply, including any BIR requirement, before the goods arrive.
- ☐ **8. Classification and valuation are settled**
  Agree on tariff classification and value documents for each component, and keep them consistent.
- ☐ **9. Packaging protects the equipment**
  Plan packing that protects panels, electronics and large parts from damage during transport.

The Readiness Checklist (continued)

- ☐ **10. Oversized components are planned for**
  Plan transport for long or heavy parts such as blades and transformers, including route checks.

- ☐ **11. Port and site staging are arranged**
  Confirm where cargo will be stored and staged, and that the site can receive it in order.

- ☐ **12. Warranty and records are kept**
  Keep serial numbers, permits and customs documents together, since they support warranty and audits.

**Moving renewable energy cargo?
Let us check it before it ships.**

Book a short call and we will review your product, permits and delivery plan before it moves.
